

Australian company Howe Foods uses EnWave technology to produce banana chips.

Detail Introduction :

EnWave recently announced a commercial license with Howe Foods ("HFG"), a diversified family-owned business and Australia's second-largest banana producer.

HFG also procured a small commercial REV machine from EnWave to begin commercial production and continue product development.

The license grants HFG exclusive rights to use EnWave's proprietary Radiant Energy Vacuum ("REV") dehydration technology in Australia to produce dried banana products and non-exclusive rights to produce dried blueberry products in Australia.
